| 190 - 195 | 6' 0" | 22 3/4" |
| 195 - 200 | 6' 0" | 22 3/4" |

important facts about
Harbour Surfboards

Each surfer has his own particular style and surf he prefers. We are in business to handcraft individual surfboards for that surfer and his waves.

Great care should be taken to pick a surfboard with proper width, length, thickness, plus shape, scoop, and weight to complement a surfer's style and the surf he is riding. He shouldn't order a "Send-Que" for small wind-blown beach breaks, nor would it be proper to purchase a beach break board for large Hawaiian surf.

One way to control the weight of a surfboard is by the size and type of wood used. For lighter surfboards we recommend above redwood 1/4", 1/8", or 1/16" latex. Foam F-bands can be used as spacers to give the shaper plenty of room to work with on extra wide boards. Another method of making surfboards lighter is to lessen the weights of fiberglass. A variety of combinations is available.

The ability to shape a custom surfboard is a gift few are blessed with. To shape, one must surf and also have a vast knowledge of the sea. Harbour Surfboards employs a choice few of these craftsmen to create fine surfboards for you. Visit us when and use for yourself.
